2.15 SSF1deg-Month-lite

The SSF1deg-Month-lite product provides CERES-observed temporally interpolated top-of-atmosphere (TOA) radiative fluxes and coincident MODIS-derived cloud and aerosol properties. Each parameter is available at monthly 1°–regional, zonal and global time-space scales. TOA fluxes are provided for clear and all-sky conditions in the longwave (LW), shortwave (SW), and window (WN) regions. The regional means are determined for 1° equal-angle grid boxes calculated by first interpolating each parameter between the times of the CERES observations in order to produce a complete 1-hourly time series for the month. After interpolation, the time series is used to produce mean parameters. Monthly means are calculated using the combination of observed and interpolated parameters from all days containing at least one CERES observation.

CERES SSF1deg TOA fluxes are interpolated using the assumption of constant meteorological conditions (termed non-GEO) similar to the process used to average CERES ERBE-like data.

CERES Edition2.6 uses Edition2 algorithms with Edition3 CERES instrument calibration and is a limited parameter precursor product for the full parameter products available after Edition3 has been processed.

SSF1deg-Month contains monthly parameters on a regional, zonal and global basis:

- All and clear-sky radiative SW, LW, and Net fluxes at TOA
- Total cloud properties (not 4-layered) for day and day/night (24-hour)
- Auxiliary parameters, for example aerosol, skin temperature, wind speed used as input to process the CERES fluxes

SSF1deg Metadata

The types of SSF1deg metadata are summarized in Table 2.15-1 and contain information which need only be recorded once per product. The CERES metadata are listed in Appendix B. Table B-1 lists the CERES Baseline Header Metadata and Table B-2 lists the CERES_metadata Vdata.

Table 2.15-1. SSF1deg-Month Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Science Data	Table B-2	1	14

All of the SSF1deg science data are organized into the HDF Grid data type and are contained in: SSF1deg-Month, which are shown in Table 2.15-2 below. The table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field.
