

ACTIVATE Data File Naming Convention

DataID_LocationID_YYYYMMDD_R#_Description.extension

- DataID: a short description of measured parameter/species, instrument, or model prefixed by "ACTIVATE"
- LocationID: an identifier of measurement platform: e.g. B200, HU25
- YYYYMMDD: UTC date the beginning of the measurement day/period
- R#: Revision number. The revision number will be R0, R1, R2, ... for publication quality data which can be released to public
- Description: optional additional description of the file if necessary, e.g WMO ID
- Extension: *.ict, *.nc, *.hdf, *.h4, *.h5, *.hdf4, *.hdf5
- The underscore character is used ONLY to separate the different fields
- Example: the filename for CN data from Falcon flight on March 26, 2020 may be:
ACTIVATE-CPC_HU25_20200326_R0.ict for publication data
